

GATE PROTOCOL · 500 GLOBAL · 2026

Verifiable events for the wallet era

Registration, paid tickets, and proof-of-attendance — one host dashboard. Built on Base. Designed for Africa and global crypto communities.

Herix Hangandu · Founder & CEO · herix.hangandu@gmail.com · gatefy.app

PROBLEM

Events still run on trust, not proof

- **RSVPs ≠ attendance** — sponsors and hosts can't trust who actually showed up.
- **Fragmented tools** — forms, WhatsApp, spreadsheets, and generic ticketing don't talk to each other.
- **Payment gaps** — crypto communities want USDC; local markets want mobile money — incumbents do neither well.
- **No portable record** — attendees lose proof they were there when the event ends.

SOLUTION

One protocol for sign-up, payment, and check-in

- **Host dashboard** — create events, set ticket price, manage buyers and rosters, export CSV, share QR.
- **Wallet + email registration** — organizers without a wallet can still run full events.
- **USDC on Base + mobile-money references** for paid tickets in emerging markets.
- **Cryptographic verification** — unique event codes and on-chain-ready attendance flow.

PRODUCT

Live today (Web + Base Mini App)

CREATE

Event form with capacity, banner, VIP gates, payment modes, mobile-money instructions.

REGISTER

Attendees sign up via wallet or email; pay in USDC or submit MoMo reference.

MANAGE

/organizer dashboard — tickets, revenue estimates, roster filters, edit (owner-only).

VERIFY

QR scan at door; verified check-ins vs pending registrations.

Stack: Next.js · Supabase · Wagmi · RainbowKit · Base mainnet USDC

HOW IT WORKS

Organizer → attendee → proof

- **1.** Host creates event and gets a verification code + registration link.
- **2.** Attendees register (wallet or email) and pay if required.
- **3.** At the event, attendees scan QR / code to verify check-in.
- **4.** Host sees live roster, exports data, and owns the attendance record.

MARKET

Who we serve

PRIMARY

Event hosts in **Africa** — meetups, conferences, launches
— needing MoMo + simple tooling.

SECONDARY

Base / crypto communities — wallet-native registration
and USDC tickets.

Global events software is a multi-billion-dollar category; we start with underserved hosts who need payments + verification in one place.

BUSINESS MODEL

How we will make money

- **Platform fee** on paid USDC tickets (target 2–5% once monetization is enabled).
- **SaaS tiers** for power hosts — analytics, branding, team access, higher volume.
- **Premium features** — VIP/token-gated access, API access for integrators.

Today: Pre-revenue (\$0 company revenue). Product-led pilots; monetization after retention proof.

TRACTION

Early stage — shipping in public

Live	\$0	1
PRODUCT STATUS	COMPANY REVENUE	FULL-TIME FOUNDER

Update this slide with your real metrics before submitting: # events hosted, registrations, repeat organizers, geographies.

COMPETITION

Incumbents vs on-chain tools

SUBSTITUTES

Eventbrite, Luma, Partiful, Google Forms, WhatsApp lists.

WEB3

POAP, Guild — strong on badges, weak on full ticketing + MoMo + host ops.

Our wedge: Full host workflow (payments + roster + verification) in one product, wallet-optional, Base-native, Africa-first payments.

TEAM

Herix Hangandu — Founder & CEO

- Technical founder — full-stack product and Web3 integration.
- Based in **Zambia**; building for local hosts and global crypto events.
- GitHub: github.com/HerixH

Add LinkedIn URL before submitting.

THE ASK

Why 500 Global

- **GTM & sales** — repeatable playbook to onboard event hosts.
- **Fundraising** — structure first institutional round after pilots.
- **Network** — fintech, crypto, and emerging-market operator intros.

We have product; we need distribution and company-building support to turn usage into revenue.
